# MARC O'POLO TASTEMAKERS

DELICIOUS DESIGN SINCE 1967.

Be it fashion or food, our lifestyle world is driven by TASTE. The word TASTE refers to our senses—the experience of good food, a nice drink, an aroma, texture, or temperature. But it also refers to a certain style or aesthetic. Marc O'Polo TASTEMAKERS draws inspiration from this world of TASTE. We are delivering DELICIOUS DESIGN SINCE 1967 by going our own way, having our own style, following our nature. On this Spring/Summer 2024 collection's menu: fashion that appeals to all the senses. A tangible and visible interplay of technical and natural, soft and shiny qualities whets the appetite for a light, carefree summer. In focus: contemporary design for a better future. A circular design approach, recycled or ecologically sourced materials, resource-saving processing, responsible production, and ethical action underline this optimism and the “casual simplicity” typical of Marc O'Polo.

- Crossbody bag made from recycled polyester
- It's sized to hold the essentials
- It has a webbing strap that will sit comfortably across your body

## ORGANIC

Natural fibres from controlled organic production, cultivated in crop rotation without the use of genetically modified seeds, synthetic pesticides or chemical fertilizers. For better soil quality. For workers' health.

### ORGANIC CONTENT STANDARD (OCS)

The Organic Content Standard (OCS) verifies that the fibres are organically sourced and guarantees their traceability from the end product right back to its origins. An OCS-certified Marc O'Polo product is labelled with the OCS seal on the care label.

OCS 'Organic 100' indicates a minimum of 95% certified organic fibre

OCS 'Organic Blended' indicates a minimum of 5% certified organic fibres

## RECYCLED FABRIC

Fibres made from recycled material reduce the use of petroleum and the volume of waste. Instead of virgin polyester, Marc O'Polo is increasingly using recycled polyester fibres made primarily from recycled PET bottles.

## RCS – RECYCLED CLAIM STANDARD

The Recycled Claim Standard (RCS 100 and RCS blended) enable companies to record the exact proportion of recycled material in a product and make it transparent and traceable through the whole supply chain. The main goals of RCS are: identification and traceability of the recycled material in the product, benefits of a third-party verification and fully independent assessment and verification of the recycled content.

## LEATHER WORKING GROUP (LWG)

We have been a member of the Leather Working Group (LWG) since July 2020. This multi-stakeholder organisation has set itself the objective of fostering responsible changes in environmental practices within the leather industry and making these more transparent by means of recognised procedures. The LWG Audit Protocol is the standard with the strictest requirements and the highest acceptance. To support ecologically responsible leather production, we source the leather for many of our products from LWG-certified tanneries. For more information, please visit [www.leatherworkinggroup.com](http://www.leatherworkinggroup.com).
